

# gelAnno

Rotate and annotate gel images to create composite blot figures

## 1. Install Plugin

- Download gelanno\_fiji.py from [github](#)
- Install plugin, two ways:
  - Fiji file > Plugins > drag wbttool file into Plugins folder
  - Open the Fiji app. Plugins > Install > open wbttool file > save to plugins
- In Fiji, select plugins > gelanno fiji

## 2. Create the Basic Figure

- Upload Image/s, Mark kDa, & Crop (must do in order)

Markers the same image:

- open image
- (click)
- (drag)

Markers in a separate image:

- open marker image
- (click)
- open gel image
- (drag)

- Edit the blot images:

- Click and drag image to move vertically
- , , and  to adjust size
- and  to adjust placement (multiple images)

- View marker coordinates:

## 3. Annotations

- (click on lane)
- drag to add horizontal line
- click to label specific bands
- click to add text anywhere
- drag to add triangle

## 4. Edit Annotations:

- delete
- change text size
- change placement

## 5. Export:
